

FOOD WASTE SOLUTIONS

DIGESTING AND DEWATERING MACHINES

- Greatly reduce your food waste disposal costs and the amount of waste requiring handling and storage
- British made and WRAS approved
- Bespoke manufactured option
- Enhance your environmental credentials with a reduced carbon footprint and a zero to landfill policy
- Incur minimal operating costs
- Simple and safe to install and run

FOOD WASTE SOLUTIONS

DIGESTING MACHINES

- Greatly reduce your food waste disposal costs and the amount of food waste requiring handling and storage
- Enhance your environmental credentials with a reduced carbon footprint and a zero to landfill policy
- British made to ISO standards and WRAS approved
- Bespoke manufactured option

Aerobic food digester safely turns both raw and cooked food waste into water

The aerobic food digester (AFD) odourlessly turns food waste into water, removing the need for waste bins which can smell and attract all manner of vermin. With no waste bins to collect you both reduce disposal costs and achieve a substantial reduction in your carbon footprint.

The AFD is simple to use: food waste can be added at any time and is continually digested by naturally occurring enzymes. The only output is grey water, which can be safely discharged into the sewage system.

The amount of waste added to the unit is accurately recorded and can be accessed via either the colour screen integrated on the machine or any smartphone, tablet or computer with internet connectivity. This feature also allows for remote diagnostics and monitoring of food waste over multiple sites, as well as determining the health of individual units. The AFD is UK manufactured to ISO standards and WRAS approved, and can digest from 20kg to 10,000kg per day.

Always connected:
View the AFD's diagnostic data remotely from any internet-enabled computer, tablet or smartphone anywhere in the world

Applications

Ideal for anywhere where food waste is produced:

- Hotels and resorts
- Canteens
- Restaurants, pubs and bars
- Sites of food production
- Hospitals and schools
- Supermarkets

Features

- Digests food waste on site
- Food is digested within 24 hours
- Continuous process allows food to be added at any time
- Grey water discharge from machine is safe to enter sewage system
- Can be installed in kitchen or work area
- Simple and safe operation
- Greatly reduces costs of food waste disposal
- Three-year warranty
- Cloud-connected diagnostics system continuously monitors and reports data
- Eliminates flies and rodents that may be attracted to food in waste bins
- Eliminates need to send food waste to landfill, enhancing zero to landfill policy
- British made to ISO standards and WRAS approved
- Fully serviced and maintained by Compactors Direct

FOOD WASTE SOLUTIONS

DEWATERING MACHINES

- Reduce your food waste disposal costs by up to 80%
- Reduce the amount of waste requiring handling and storage
- Free up other waste products for recycling such as paper, cardboard and plastic
- Incur minimal operating costs
- Consume very little water
- Safe and easy to use

A food waste processing station for every requirement

Food waste comprises of up to 80% liquid and can be extremely costly to dispose of. Our machines use a food waste disposer to grind down the waste into small particles and a dewaterer to extract the solids, allowing grey water to dispense to drain whilst solids are captured in a small lidded bin. Choose from a wide range of processing stations that are tailored to both process your waste efficiently and effectively and fit in with your existing kitchen layout.

From vegetable peelings and plate scrapings to large bones and fish skins, the correct unit is specified to deal with both the type and the amount of food waste that you produce. By treating the food waste as it is produced, other waste items can be processed separately and, wherever possible, recycled.

Applications

Ideal for anywhere where food waste has a high liquid content:

- Hotels
- Canteens
- Restaurants
- Sites of food production
- Pubs
- Bars

Features

- One set of controls operates both the food waste disposer and the dewaterer
- Unit supplied pre-plumbed and pre-wired for easy installation
- Height-adjustable feet counter uneven floor surfaces
- Optional magnetic cutlery savers help prevent cutlery from entering the unit
- Wide choice of dimensions or can be built to order to fit your available space

- Water flow control enables the operator to adjust the amount of water being used, saving you money
- Hopper rim guides the waste into the food waste disposer
- Splash-back prevents any water or food from escaping down the back of the unit
- Dewatered food waste is the perfect material for recycling into compost or converting into renewable energy
